

- Protects your costly chemical investment
- Encapsulates your pre-emerge herbicide, your insecticide and fungicide from UV decomposition
- Lengthens the time your pre-emerge can wait to be incorporated by a rain
- Has proprietary drift control built into it to protect bordering growing crops

# Extend

## NEXT GENERATION POLYMER ENCAPSULATION TECHNOLOGY

---

### EXTEND HELPS YOUR CHEMICALS WORK BETTER.

---

You fight an ongoing battle with weeds that are harder and more expensive to kill than ever. To prevent problem weeds, you probably treat with pre-emergent herbicide in the early spring before weeds have a chance to get established. Extend can help your pre-emergent herbicide work even better.

#### HOW IT WORKS

Extend works by encapsulating your pre-emergent herbicide, your insecticide and fungicide, and protecting them from UV decomposition. Our product not only lengthens the window of time when your pre-emergent herbicide needs a rain to incorporate the chemical, it also leaves a residual benefit, and it has proprietary drift control built in to keep the herbicide where you need it. With Extend you can protect your investment in costly chemicals for less than a dollar an acre.

#### THE FULL EFFECT

Extend assists you in getting the full effectiveness out of your pre-emerge herbicide. With more farmers applying pre-emerge herbicide on dry land acres, Extend can be a significant tool to protect your high dollar chemical investments. Extend ensures less drift and more time for giving your fight against resistant weeds a boost.

#### APPLICATION RATE

The application rate is 1-4 quarts per 100 gallons of water.
