

# Padlock<sup>PLUS</sup>

## LOW-LOAD AMS WATER CONDITIONING AGENT

A BLEND OF WATER CONDITIONING AGENTS + POLYMER DRIFT CONTROL TO CONDITION WATER WHILE SIMULTANEOUSLY CONTROLLING DRIFT.

- ➔ Contains all the benefits of Padlock plus AMS and other water conditions
- ➔ Reduces the amount of other adjuvants you have to add to your tank mix
- ➔ Our special polymer blend reduces volatility of ammonia in AMS
- ➔ Completely glyphosate and pesticide compatible

### HOW IT WORKS

Hard water requires treatment for improved glyphosate performance. Padlock Plus combines a blend of water conditioning agents + polymer drift control to condition water while simultaneously controlling drift. This combination provides a distinct advantage over other water conditioners.

### THE FULL EFFECT

Padlock Plus contains a low load of ammonium sulfate (AMS), and our special polymer blend reduces the volatility of the ammonia in the AMS. You can add additional AMS to the tank mix if labels call for full rates of AMS. And, since non-ionic surfactants are already in the mix, there's no need to add additional surfactants.

### THE ADDED BENEFIT

The benefits with Padlock Plus grow when you consider all the beneficial products bundled together in this water-conditioning blend. Your sprayer reload time is decreased during critical weather windows with the combination of adjuvants making tank mixes smoother and quicker. With Padlock Plus you get the speed and quick mixing of spray grade liquid AMS, surfactant, and our industry best Padlock Drift Control.

### APPLICATION

The Application Rate is 1-8 quarts per 100 gals spray solution, depending on water hardness, wind speed, and other weather conditions. 1 gallon of Padlock Plus contains 1qt Padlock Drift Control, 1qt NIS, 2 qts low load AMS.
