

Shackle

NON-AMS WATER CONDITIONER

WATER CONDITIONER USED WITH
HERBICIDES IN APPLICATIONS WHERE
AMS IS UNAPPROVED OR NOT ADVISABLE

- Eliminates volatility issues
- Technology to put your neighbor at ease
- More effective chelating metallic ions than AMS
- Economically smart

HOW IT WORKS

Shackle chelates metallic ions, including calcium, that are found in hard water, therefore giving farmers a safe option to apply herbicide without volatility drift.

ADVANTAGES

Shackle's premium performance gives peace of mind and frees the farmers to use the chemicals that will work best for them with a higher percent of the costly application staying on target.

FROM OUR FARM TO YOURS

Shackle is a farmer tested and scientifically approved alternative to traditional methods of conditioning water where volatility is a concern. Shackle is a premium Non-AMS water conditioner engineered to outperform competitive products, while protecting the farmer's input costs.

APPLICATION

The recommended application rate is 1 quart per 100 gallons of water. Always follow chemical label recommendations for water conditioners.
