

- Eliminates volatility issues
- Chelates metallic ions
- Lengthens the effectiveness of residual chemicals
- Encapsulates your pre-emergents from UV decomposition
- Protects your costly chemical investment

Shackle **EXT**

**NON-AMS WATER CONDITIONER, ENCAPSULATOR,
AND DRIFT CONTROL COMBO**

CONTAINS NON-AMS WATER
CONDITIONING BENEFITS PLUS THE
ENCAPSULATION TECHNOLOGY OF
EXTEND AND OUR NEXT GENERATION
POLYMER DRIFT CONTROL

HOW IT WORKS

Shackle EXT chelates metallic ions, including calcium, that are found in hard water, giving farmers a safe option to apply herbicide without volatility drift. Shackle EXT is for tank mixes where water conditioning is needed and traditional methods are not approved. Shackle EXT contains our industry exclusive residual encapsulation technology that increases the life and effectiveness of chemicals that have residual properties. Shackle EXT also contains our next generation polymer drift control technology which improves coverage, decreases evaporation, and increases canopy penetration.

FARMER TO FARMER

Shackle EXT was designed and engineered on the farm by chemists for farmers. Shackle is your all in one solution for your Non-AMS water conditioning needs and when coupled with our incredible residual encapsulation technology and our next generation polymer drift control, Shackle EXT will lead the way.

APPLICATION

The recommended application rate is 2 quarts per 100 gallons of water. Always follow chemical label recommendations for other treatment rates.
