FARMERS HELPING FARMERS NEWSLETTER

JANUARY 2018

NEW PRODUCTS FOR 2018

We are excited to be rolling out three new products for the 2018 farm season.

ShackLock

With ShackLock in your spray tank, you go to the field armed with our expert chelating water conditioner, proven to decrease volatility, paired with our next generation polymer drift control and premium wetting/surfactant technology.

ABSIL

This ABSIL blend provides the industry best standard surfactant technology for spreading, sticking, and wetting. The combination of modified seed oil helps to increase pesticide absorption and penetration through cell walls.

FURY

This HSOC enhances chemical uptake for improved performance.

FHSU SHOTGUN SPORTS TEAM VISITS

The FHSU Shooting Team came to assist EGE in its annual Shane McBee & Sid Sizemore Trap Shoot and Pheasant Hunt in October. Three members and two coaches guided the 11-16 year olds in gun safety, proper gun mount, and how to correctly lead targets. The team was the 2016 SCTP National Champions and had a solid season in 2017. Their willingness to volunteer and help our youth speaks to the character of their program and team!

BASF LABEL APPROVAL

EGE Products announces that its line of industry leading agricultural products has gained label approval with BASF's Engenia herbicide.

The line of EGE products includes Absorb 100, Padlock, Rivet 90, Shackle and Shackle EXT. This agricultural technology helps to minimize drift issues, increase absorption, and encapsulate and protect chemical investments.

EGE'S 10 YEAR ANNIVERSARY

EGE celebrated its 10 year anniversary in 2017! "Our goal is to add value for farmers, and we saw how adjuvants would fit with that mission," states Matt Jaeger. Luke and Matt, brothers and co-founders, started out hands-on with the chemical side after farming and building a biodiesel plant together. At that point, it seemed natural to transition and manufacture products that would benefit farmers. "We heard about a wave of issues coming at farmers with weed resistance and other obstacles, so seeing the value in good farm practices, we want to help our customers with spray applications." The Jaegers are thankful for the support and loyalty of EGE's customers and look forward to what the future holds.

UPDATE FOR PRODUCTION LINE

With the demand for EGE Products increasing, we have introduced a new component to our production line.

The Jib Crane will help us lift and add the massive AMS bags used to create our top of the line water conditioner + surfactant + drift control = Padlock PLUS.

OUR PRODUCTS

ABSORB 100
Concentrated MSO

Padlock
Next Generation Polymer
Drift Control

Padlock^{PLUS}
AMS Water Conditioner +
Drift Control + 90-10 Surfactant

Extend
Next Generation Polymer Residual
Encapsulation Technology

Rivet 90
Nonionic Surfactant

Shackle
Non-AMS
Chelating Water Conditioner

Shackle^{EXT}
Water Conditioner &
Encapsulator

ShackLock
Water Conditioner &
Drift Control

ABSIL
Organosilicone with MSO

FURY
HSOC
