

- ➔ Blend of quality modified vegetable oil.
- ➔ Maximizes certain pesticides.
- ➔ Get great results with Fury.

FURY

High Surfactant Oil Concentrate

Highly concentrated blend of quality modified vegetable oil, and surfactant blend.

HOW IT WORKS

Fury is a 60% proprietary blend of free fatty acids, modified vegetable oil High Surfactant Oil Concentrate (HSOC). We maintain a high load 40% surfactant content. With this increased surfactant amount, water spreads and efficiently sticks to plants. This concentrated formula can be used at reduced rates compared to traditional crop oil concentrates. Fury is specifically designed to benefit many pesticide applications with a high content of non-ionic surfactant.

ADVANTAGES

Fury may be used in place of nonionic surfactants, HCOC's or crop oil concentrates (COC) in liquid spray mixtures. When used as directed, Fury maximizes certain pesticides.

FROM OUR FARM TO YOURS

Fury was designed and engineered on the farm by chemists for farmers.

APPLICATION

8-32 oz/acre or .25-1 percent by volume a replacement for nonionic surfactants and COC's. Use the higher end of use rates when conditions are hot and dry.
