

CONDENSE +DRA

NON-AMS WATER CONDITIONER, NONIONIC SURFACTANT & DRA

Blend of surfactant, drift reduction agent, non-AMS water conditioner.

HOW IT WORKS

Condense+DRA is an ammonia free water conditioning agent designed for tank mixes with dicamba herbicides. It contains a nonionic surfactant, drift reduction agent, defoamer, and a complete water conditioner that chelates with all metallic ions including calcium. Condense+DRA creates an optimized sized spray droplet and slows down the evaporation for enhanced time for chemical uptake of active ingredients on target.

ADVANTAGES

Condense+DRA can be used for a wide range of tank mixes when accompanying labels calling for water conditioners and spreader-wetter adjuvants.

APPLICATION

When used as a DRA for Xtendimax, Engenia, or FeXapan tank mixes: 5 pints per 100 gallons of water.

When used as a water conditioner: 2-4 quarts per 100 gallons of water (0.5% v/v - 1.0% v/v).

When used as a drift reduction agent: 1-3 quarts per 100 gallons of water.

See product label for complete usage rates.

- ▶ Ammonia free
- ▶ Chelates with all metallic ions including calcium
- ▶ Can be used with a wide range of tank mixes
