

CORPORAL

H·S·O·C

HIGH SURFACTANT OIL CONCENTRATE

Highly concentrated blend of modified vegetable oil, and surfactant blend.

HOW IT WORKS

Corporal HSOC is a 60% proprietary blend of free fatty acids, modified vegetable oil High Surfactant Oil Concentrate (HSOC). We maintain a high load 40% surfactant content with this increased surfactant amount, which helps water spread and efficiently stick to plants. This concentrated formula can be used at reduced rates compared to traditional crop oil concentrates.

ADVANTAGES

Corporal HSOC contains humectant qualities that have proven to improve the effectiveness of glufosinate and other contact herbicides. Corporal HSOC may be used in place of nonionic surfactants, High Surfactant Crop Oil Concentrates (HSCOC), or High Concentrate Crop Oil Concentrates (HCOC) in liquid spray mixtures. When used as directed, Corporal HSOC maximizes certain pesticides.

APPLICATION

8-32 oz/acre or .25-1 percent by volume a replacement for nonionic surfactants and COC's. Use the higher end of use rates when conditions are hot and dry.

- ▶ Blend of quality modified vegetable oil.
- ▶ Contains humectant qualities.
- ▶ Get great results with Corporal HSOC.
