

NEXT GENERATION POLYMER RESIDUAL ENCAPSULATION TECHNOLOGY

Increases Chemical Effectiveness Through Our Proprietary Encapsultaion Technology

HOW IT WORKS

Length EXT works by encapsulating your residual chemicals and protecting them from UV decomposition. Our product extends the window of time when your chemical needs to be incorporated, and it has proprietary drift control built in to keep the chemical where you need it. Our proprietary polymers do drastically reduce chemical loss through evaporation. With Length EXT, you can protect your investment in costly chemicals for less than a dollar an acre.

ADVANTAGES

Length EXT helps to ensure you get full effectiveness out of your residual chemicals. Length EXT ensures less drift and more time for your fight against resistant weeds, insects, and fungus.

APPLICATION

The application rate is 1-2 quarts per 100 gallons of water. With low gallon aerial applications a higher rate is recommended. See product label for complete usage rates.

- ▶ Protects your costly chemical investment
- ▶ Encapsulates your chemicals from UV decomposition
- ▶ Extends the time your pre-emerge can wait to be incorporated by a rain
- ▶ Has proprietary drift control built into it to protect bordering growing crops
