

D3-LINE

NITRIFICATION INHIBITOR

Less corrosive, new chemistry that reduces leaching and denitrification.

HOW IT WORKS

By slowing down nitrification, D3-Line makes your Nitrogen application last throughout the full growing season.

ADVANTAGES

D3-Line adds ease with the ability to be directly injected during your application process. It is significantly less corrosive than similar products, which reduces application plugging issues as well.

APPLICATION

USE RATE PER TON FERTILIZER

Anhydrous Ammonia - 2-4 qts/ton

See product label for complete usage rates.

- ▶ Drastically less corrosive than other similar products
- ▶ Slow release for the length of the growing season
- ▶ Can be injected directly during application
- ▶ Can be use with Urea and UAN applications. See product label for usage rates.
