

CONDENSE^{+DRA/VRA} COMPLETE

NON-AMS WATER CONDITIONER, HUMECTANT, SURFACTANT, DRA & VRA

Engineered to meet your Dicamba spraying needs.

HOW IT WORKS

Condense Complete is a new, all in one formula, primarily engineered to meet your dicamba spraying needs. This improved formula adds a higher performing surfactant, additional defoamer, and the industries top rated Drift Reduction Agent (DRA) + Volatility Reduction Agent (VRA) technology. The VRA technology includes buffering agents, which aid in maintaining the right pH in the tank mix solution to reduce volatility. It also has the added benefit of being an ammonia free, complete water conditioner that chelates with all metallic ions, including calcium. Condense Complete creates an optimal sized spray droplet and slows down the evaporation to enhance the time for chemical uptake of active ingredients.

ADVANTAGES

Condense Complete is the highest rated DRA + VRA, proven to be compatible with a wide range of tank mixes. Ultimately it is a simple, all-in-one formula, creating a quick and easy tank mix for versatile applications. With raw ingredients that are easily accessible during this supply chain shortage, you can always count on Condense Complete for your spray needs.

APPLICATION

Add 2-4 quarts of Condense Complete per 100 gallons of spray water (0.5 – 1.0% v/v) when used in place of ammonium sulfate.

For general use as a volatility reduction agent, use 2 gallons of Condense complete per 100 gallons of spray water (2.0% v/v).

For general use as a drift reduction agent, use 1-2 gallons of Condense complete per 100 gallons of spray water (1.0-2.0% v/v).

For use as a drift and volatility reduction agent for Dicamba tank mixes: Use Condense Complete at 2 gallons per 100 gallons for Engenia®, Tavium® Plus VaporGrip® Technology, or XtendiMax® Herbicide with VaporGrip® Technology spray mix (2.0% v/v).

- ▶ Total DRA & VRA, all-in-one formula
- ▶ Raw materials in good supply
- ▶ Highest rated for compatability & efficacy
