

J-LINE

NITROGEN STABILIZER & NITROGEN EXTENDER

Joining two great chemistries that offer dynamic blending for complete prill coverage of Urea and reduce leaching & denitrification.

HOW IT WORKS

Reduces volatility of Nitrogen products and keeps the Nitrogen where you apply it. By slowing down nitrification, J-Line makes your Nitrogen application last throughout the full growing season.

ADVANTAGES

J-Line's proprietary surfactant ingredient system allows for 25% faster penetration and absorption into the urea prill, creating better and longer protection from volatility. J-Line also adds ease with the ability to be directly injected during your application process. It is significantly less corrosive than similar products, which reduces application plugging issues as well.

APPLICATION

USE RATE PER TON FERTILIZER

Urea	2- 4 qts/ton
UAN	1-3 qts/ton

See product label for complete usage rates.

- ▶ Reduces volatility, even in tough conditions
- ▶ Drastically less corrosive than other similar products
- ▶ 25% faster blending with UAN, even with splash tank blending
- ▶ Proprietary surfactant ingredient carries fertilizer through soil more completely. Plant absorption is improved as well.
