

N-LINE

NITROGEN STABILIZER

Urease inhibitor with dynamic blending for complete prill coverage of Urea and accelerated tank mixing of UAN.

HOW IT WORKS

Reduces volatility of Nitrogen products and keeps the Nitrogen where you apply it.

ADVANTAGES

N-Line's proprietary surfactant ingredient system allows for 25% faster penetration and absorption into the urea prill, creating better and longer protection from volatility. Lower viscosity improves the blending times compared to the industry standard.

APPLICATION

USE RATE PER TON FERTILIZER

Urea	2-4 qts/ton
UAN	1-1.5 qts/ton

See product label for complete usage rates.

- ▶ Reduces volatility, even in tough conditions
- ▶ 25% faster blending with UAN, even with splash tank blending
- ▶ Proprietary surfactant ingredient carries fertilizer through soil more completely. Plant absorption is improved as well.
