

# FULVIC ACID

*A high quality, plant derived fulvic acid, which adds value to starter fertilizers and improves nutrient availability for early season seedling development.*

---

## Benefits

- Low color formulation maintains original starter color and minimizes staining of application equipment.
- Compatible with acidic and high salt fertilizers
- Increases the solubility of iron, aluminum and calcium phosphates
- Fulvic Acid liberates and prevents the fixation of P when added together with phosphate fertilizers
- Improves the quality of starter fertilizers formulated for in-furrow, over the row, or 2x2 applications. Early season nutrient availability is key to seedling root developments, critical to season long plant health.

## Typical Analysis

2.2 pH

20% Fulvic Acids

## Physical Properties

### Liquid

20% liquid solution of plant derived fulvic acids

## Compatability

Compatible with most liquid fertilizers, micronutrients, and pesticides. However a jar test is recommended before mixing for field application.

## Storage Stability

May vary from a few months to several years dependent upon the specific product and storage information.
